

## Pharmacists can Prescribe “Pharmore” than You think

By Meagan Turgeon-Walter, Director of Pharmacy

Your pharmacist is one of the most accessible health care professionals. Pharmacists are now trained to assess, evaluate and prescribe most hormonal contraception, urinary tract infection treatments and new emergency contraception options. Access to pharmacists at the Clinic for timely treatment for these health issues will assist women to better manage their health.

Don't forget that your pharmacist is able to initiate treatment and provide prescription drugs for a growing list of other ailments such as:

- mild acne
- hay fever, seasonal allergies
- cold sores
- diaper rash
- insect bites
- canker sores
- oral thrush

- painful periods
- acid reflux
- headaches and migraines
- hemorrhoids
- muscle strains, sprains and pains
- bacterial skin infections
- athlete's foot, ring worm, jock itch
- atopic dermatitis

At the Community Clinic Pharmacy, we serve all members of the public, regardless of whether they have a family doctor or nurse practitioner currently practicing at the Community Clinic. Keep your pharmacist in mind next time you need advice or wish to initiate treatment because a doctor's or nurse's visit may not be necessary.

More information is available at [pharmore.ca](http://pharmore.ca).

I hear pharmacists can prescribe for... *ahem...*

# Hemorrhoids?

We prescribe...

**pharmore**  
than you think
